X-RAY CRYSTALLOGRAPHY (2.2 ANGSTROMS).

X-RAY CRYSTALLOGRAPHY (2.2 ANGSTROMS).

Meno K., White C.G., Smith A.T., Gajhede M.;

Submitted (DEC-1998) to the PDB data bank.

Submitted (DEC-1998) to the PDB data bank.

FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANTS,

BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TOWARD

WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE

BEDENDENT ON BACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

-!- CATALYTIC ACTIVITY: Donor + H(2)0(2) = oxidized donor + 2 H(2)0.

-!- CORACTOR: Binds 1 protoheme IX, 1 iron(III) ion and 2 calcium io
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Structural interactions between horseradish peroxidase C and the substrate benzhydroxamic acid determined by X-ray crystallography."; Diochemistry 37:8054-8060(1998).

"Structure of the horseradish peroxidase isozyme C genes.";

Eur. J. Biochem. 173:681-687(1988).

-I- FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANTS, BIOSYNTHESIS AND DEGRADATION OF LICONIN, DEFENDE RESPONSE TOWARD WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEFENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

-I- CATALYTIC ACTIVITY: DONOT + H(2)0(2) - OXIDIZED donor + 2 H(2)0.

-I- COFACTOR: Binds 1 protoheme IX and 1 iron(III) ion.

-I- SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PRXC1B OR HPRC2.

-!- FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANT BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TO WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.
-!- CATALYTIC ACTIVITY: Donor + H(2)0(2) = oxidized donor + 2:
-!- COFACTOR: Binds 1 protoheme IX and 1 iron(III) ion.
-!- TISSUE SPECIFICITY: ROOTS.
-!- SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gene

RIKEN Arabidopsis full length cDNA clones (RAFLS) sequenced by T SSP consortium (Salk/Stanford/PGEC).";

SUBmilted (OCT-2001) to the EMBL/GenBank/DDBJ databases.

C I - FUNCTION: REMOVAL OF H(2)0(2), OXIDATION OF TOXIC REDUCTANTS BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TOW WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.

C I - CATALYTIC ACTIVITY: DONOT + H(2)0(2) = OXIGIZED donor + 2 H(COFACTOR: Binds 1 protoheme IX and 1 iron(III) ion.

C I - TISSUE SPECIFICITY: ROOTS.

C I - SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDA

                                                                                                                                                                                                                                                                                                                                                       FUNCTION: REMOVAL OF H(2)O(2), OXIDATION OF TOXIC REDUCTANTS,
BIOSYNTHESIS AND DEGRADATION OF LIGNIN, DEFENSE RESPONSE TOWARD
WOUNDING AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE
DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE.
CATALYTIC ACTIVITY: Donor + H(2)O(2) = OXIGIZED GONOR + 2 H(2)O.
COPACTOR: Binds 1 protoheme IX and 1 iron(III) ion.
SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEKOXIDASE
SIMPLAMATIVE
                                                                                                                                                                                                                                                                                                                                                 SUBFAMILY.

FUNCTION: REMOVAL OF H(2)O(2), OXIDATION OF TOXIC REDUCTANTS, BIOSYNTHESIS AND DEGRADATION OF LIGHN, DEFENSE RESPONSE TOWARD WOUNDING, AND METABOLISM OF AUXIN. THESE FUNCTIONS MIGHT BE DEPENDENT ON EACH ISOZYME/ISOFORM IN EACH PLANT TISSUE. CATALYTIC ACTIVITY: DONOT + H(2)O(2) = OXIGIZED donor + 2 H(2)O. COPACTOR: BINDS 1 POTCOHOME IX and 1 ITON(III) ion.

SIMILARITY: BELONGS TO THE PEROXIDASE FAMILY. PLANT PEROXIDASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DFVAAMIRMGNVGVLTGTAGQIRRNCRVVNS
